

Regin – OEM

We turn your visions and ideas into finished products

 **REGIN**

THE CHALLENGER IN BUILDING AUTOMATION

We turn your visions and ideas...

Improve your company's competitiveness

In order for your company to be successful, you must be one step ahead of the competition. The ability to develop and launch new products is one of the most important success factors. By being ahead of your competitors, you will also have a better chance of increasing profits. To be the front-runner, you have to make comprehensive investments and maintain a high pace in your product development.

Let Regin OEM realise your visions and ideas. We have extensive experience and high competence. We have been developing products and systems for control of indoor climate since 1947. This has given us broad knowledge. Through our global market presence, we know what customers and the market demand. Therefore, we can help you all the way to finished products in a fast and efficient way, without large investments whilst maintaining full control of time and costs.

A team of specialists who listen and commit

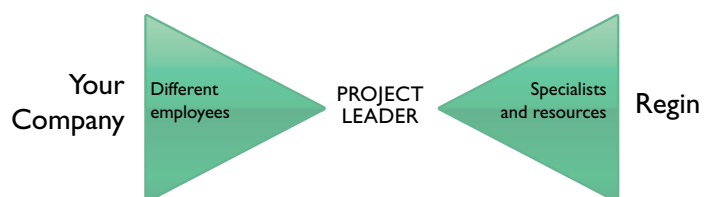

Our job is to help you reach your goals. We listen, commit, and stretch ourselves for you.

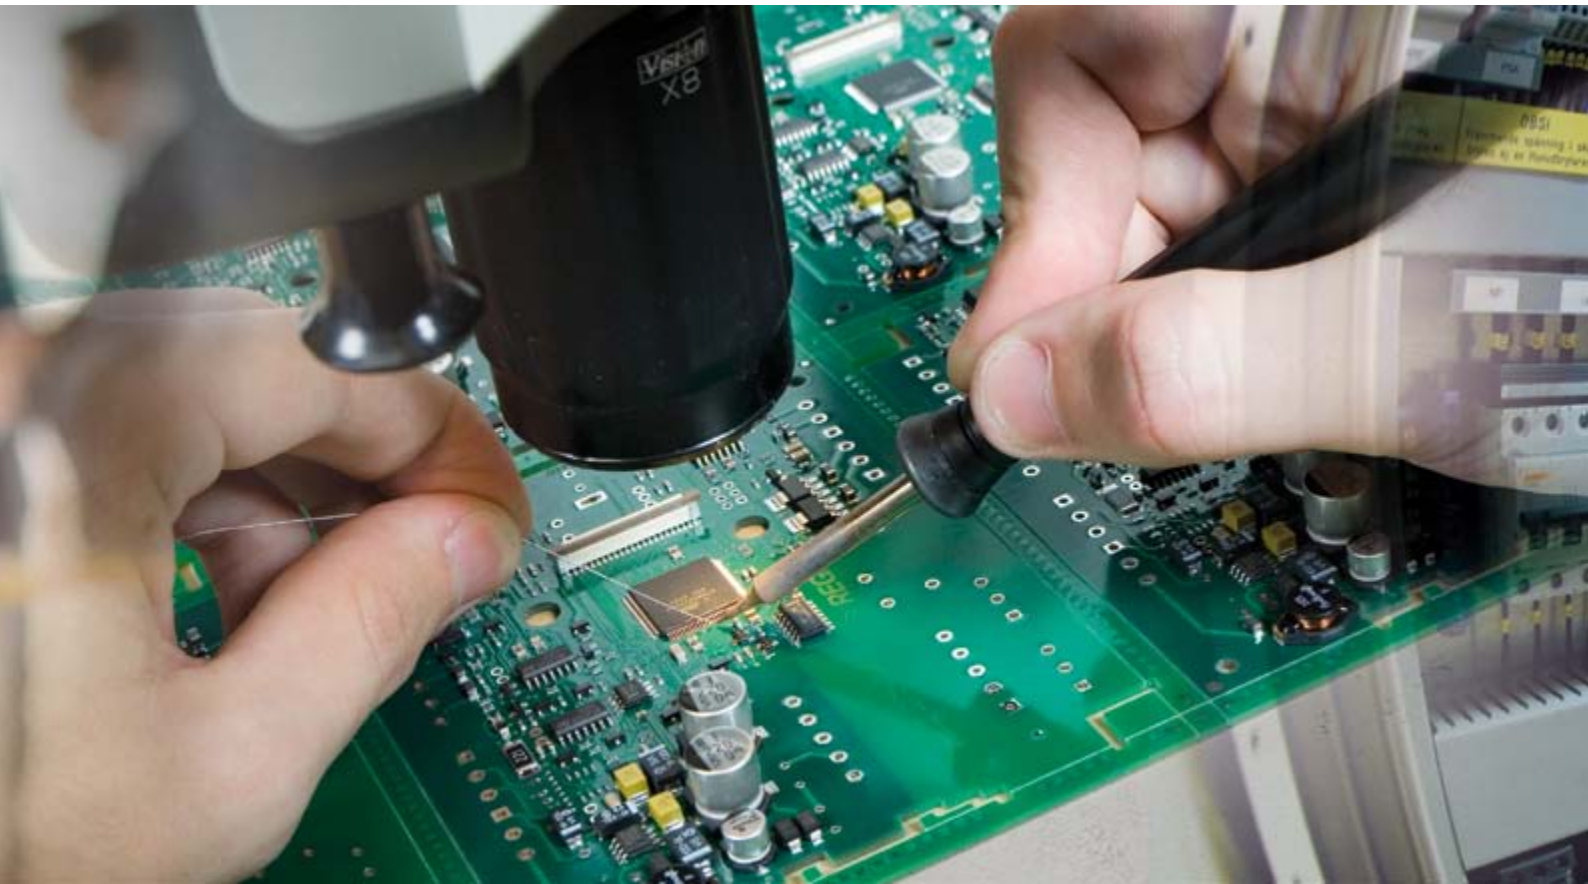

In order for your projects to run smoothly, we have banned all bureaucracy. You will be in direct contact with the project leader, who is responsible for the project.

He has a team of specialists behind him, who can be consulted when needed. Members of your organisation will be in direct contact with these.

We will do anything we can to make things easy for you.

- Project leaders with technical and commercial competence
- Access to specialists within every area from design to programming
- Purchasing department with a wide network
- Technical support/helpdesk

Production without tying up resources

All production is handled by partner companies who work solely with our products and are specialised in areas such as PCB production, injection moulding of casings, mounting, etc. You get access to the latest and most modern production technologies, without having to tie up money in production. All products are tested to ensure the highest possible quality.

We choose and purchase components ourselves. A wide network of suppliers keep us updated on new products and technology.

This gives us many interesting ideas for our product development.

- Product design, construction
- Prototype production
- PCB production
- Injection moulding of casings
- Assembly
- Testing
- Customising to different applications
- Programming
- Customised packaging
- Manuals, instructions

Specialists who build up systems

Many products are intended to be used in a system, which makes remote control, remote reading and alarm handling important. Competence to integrate products into systems is required at the installation.

The vulnerability after breakdown is often great and fast service is required. We have a unique network of Certified Integrators, who handle these problems for you. They have extensive competence and experience and can offer a wide range of services, from planning and project management to programming, installation, maintenance and service. To become certified, they have passed our basic courses and continue to take courses within specific areas. This means that your customers can feel safe.

Satisfied customers is an important competitive mean.

- Installation, commissioning
- Solutions for integration
- Maintenance and service
- Responsibility for operation

Knowledge that takes you further

Development progresses quickly. As a product developer, it is important that you keep á jour. As one of Regin's customers, you get the opportunity to take part in our courses at the Regin Academy.

The courses give you both technical understanding as well as general, practical knowledge of our systems and products. The courses are based on our experience in building automation and the requests from consultants, integrators, property managers etc.

Theory is mixed with practice, which means that you will be able to put your knowledge to use immediately after the end of the course.

- Fixed course schedule
- Customised courses
- Continuous information about the latest news within different areas

ACADEMY

KNOW-HOW IN
BUILDING AUTOMATION

 **REGIN**

...into finished products adjusted according to your needs

Regin OEM* is specialised in the area of control and supervision. We have expert knowledge of anything from controllers, transmitters and sensors to advanced systems for building automation. Our strength is that we know how to integrate products into systems. We can handle many communications technologies and standards, including Internet-based solutions.

Regin OEM takes on assignments which include every step of the process, from product design, tool selection, PCB production, injection moulding, mounting and testing, all the way to packing.

Since we have a long tradition within flow control, we also develop/produce valves and actuators for different OEM applications.

Examples of our specialised areas:

- Zone control*
- Ventilation*
- Heating/cooling*
- Dehumidification/Humidification*
- Heat pumps*
- District heating/cooling*
- Circuit card/PCB*

*)OEM stands for Original Equipment Manufacturer. It means that Regin OEM develops and produces complete products or components according to your specifications. These can be marketed as products under your own brand or be used as part of your end products.
