

WE TAKE BUILDING  
AUTOMATION PERSONALLY

en

MANUAL

ADD:IO

## THANK YOU FOR CHOOSING REGIN!

Ever since Regin was established in 1947, we have developed and marketed products and systems that create good levels of indoor comfort. Today, we are an important player with one of the market's broadest ranges for building automation.

Our goal is to make real estates in the world more energy efficient. Regin is an international group and our products sell in over 90 countries. Thanks to our global presence with strong local representation, we are well aware of the requirements of the market, as well as of how our products and systems function under the most variable conditions. Every year, Regin makes substantial investments in the development of our systems and HVAC-products.

## I Introduction

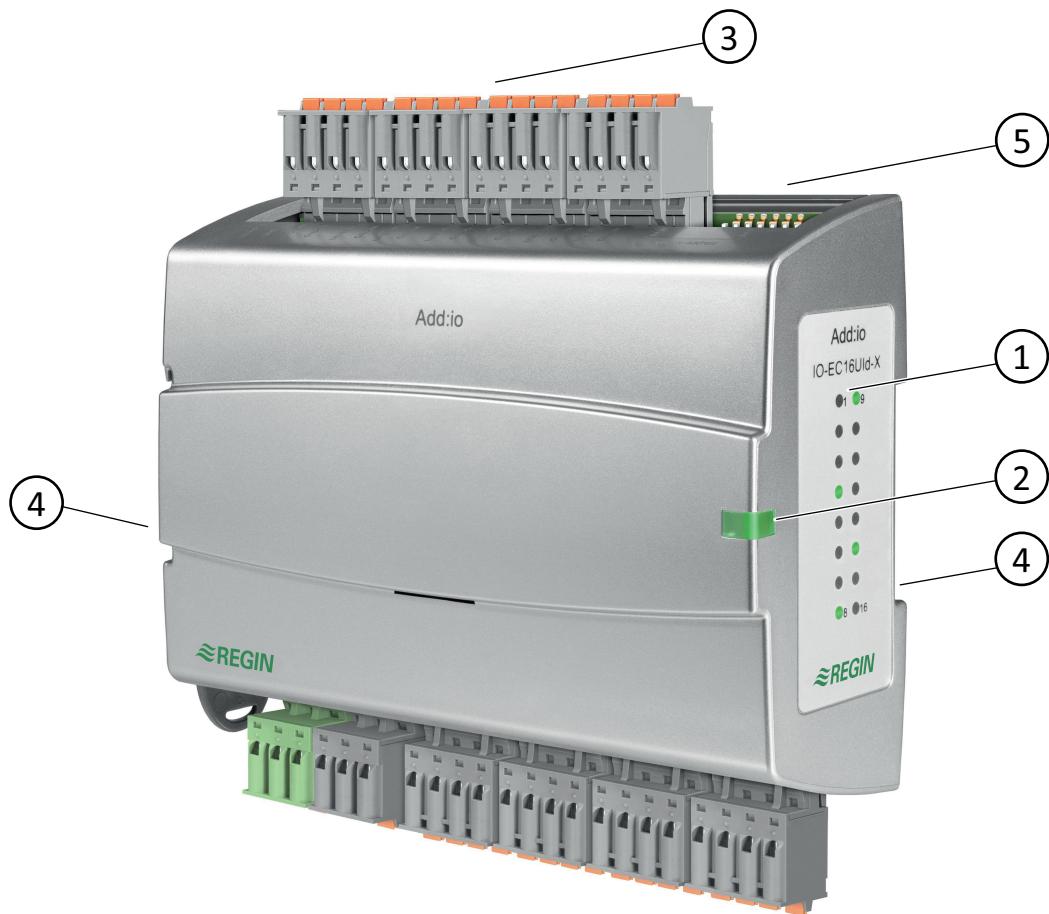

### I.1 General

The Add:io series is intended for use in combination with EXOclever and EXOcompact to expand the number of I/Os in a system. Each unit expands the system with 16 I/Os. An EXOclever controller can be expanded with unlimited I/Os and an EXOcompact with up to 50 I/Os.

The units are programmable in EXOdesigner, the same environment used for all other EXO controllers.

### I.2 Layout

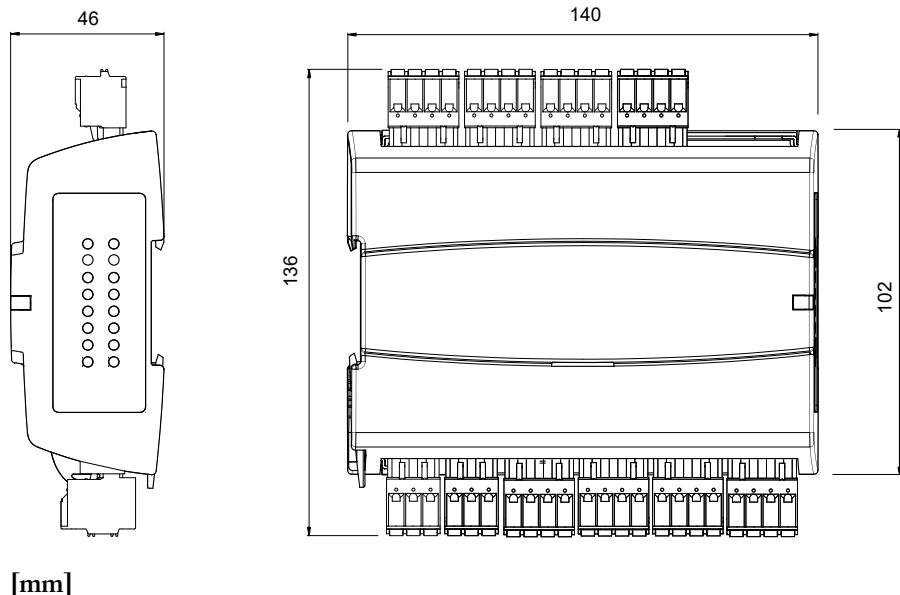

All available Add:io models have a similar design and layout. It is shown in *Figure 1-1*.

*Figure 1-1* Add:io layout with status indications

- ① DO or DI indications
- ② General status indications
- ③ Push-in terminals
- ④ Grooves for DIN-rail mounting on short- or backside
- ⑤ DIP-switches for system addressing

### 1.3 Dimensions

### 1.4 Mounting

The controllers are designed to be mounted on a DIN-rail. They can be mounted in two ways, either on their backside or stacked on the short side with a high packing density as a result. When stacked they fit smoothly together thus requiring minimal space (see *Figure 1-2 Stacked units*)

Figure 1-2 Stacked units

### 1.5 Communication

The EFX-port is the communication channel used between the Add:io and a master controller (e.g. EXOclever). EFX is RS485-based communication.

## 1.6 Naming

All Add:io models are named the following way:

<b>IO-ECzzyy-X</b>	IO-EC = Add:io family naming zz = Number of IOs yyy = IO-type, e.g. UId -X = EFX communication
--------------------	---

## 2 Deployment

### 2.1 Installation recommendations

Follow these guidelines regarding shielded cables:

- ✓ Only use shielded cables when the installation environment requires it.
- ✓ No need for shielded cables between modules, if installed in close proximity
- ✓ Connect shield to chassis ground at only one end of the cable.

For RS485 communication, the terminal *N* is only required between systems not sharing the same ground potential. When used, it is not recommended to connect it to the cable screen. Note that it may be a single wire, but must be drawn together.

When the cable length is less than 30 m in RS485, a terminator is not required in normal cases. The use of terminators will decrease signal integrity thus try without first. When used, match the terminator value to the characteristic impedance of the cable.

**Note!** For analogue input signals, do not mix and use one GND for several inputs.

The technical earth terminal in the IO modules power connector is not intended as a connection for cable screens.

When connecting and measuring an external transmitter in an UI port this is done between terminals UIx and GNDx (where x is the channel number between 1...16). Note that the intention is to use the corresponding GND for the connected UI, especially when measuring sensitive signals or using DI pulse (fast) mode.

Wiring examples can be found under each specific Add:io model in the following chapters.

### 2.2 General status indicator

The Add:io has a general status indicator mounted at the middle right front side, see *Figure 1-1*, which can be inspected both when the unit is mounted on its back and side. This indicator changes colour depending on its actual status as shown in *Table 2-1*.

*Table 2-1 Status indication at the front*

LED status	Controller status
Green, solid	Power on and communication is established
Red, solid	Battery problem
Yellow, blink 2.5 Hz	Identification (wink)
Orange, blink 1 Hz	IO-board is not in contact with CPU-board (via EFX)

The status indications that are present on the side, see *Figure 1-1*, are only active when the universal inputs or outputs are configured as DI and DO. The indicator colours are shown in *Table 2-2*.

*Table 2-2 Status indications on the side*

UI configuration	LED colour	IO status
DI	Green	ON
DO	Yellow	ON

**Note!** The values in *Table 2-2* are default configurations. The LEDs can also be configured for other indications. For example, red for a DI that is used for an alarm.

## 2.3 System addressing

The module has to be given an address between 2-32 in order to be able to communicate with it in a system. The address is set with the 8-bit DIP-switch marked with *Module Address* on the Add:io unit. The least significant bit (LSB) is marked *Bit 1* and the most significant bit (MSB) is marked *Bit 8*.

A switch is activated by setting it to 1. In *Figure 2-1* the address is set to 3.

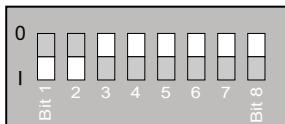

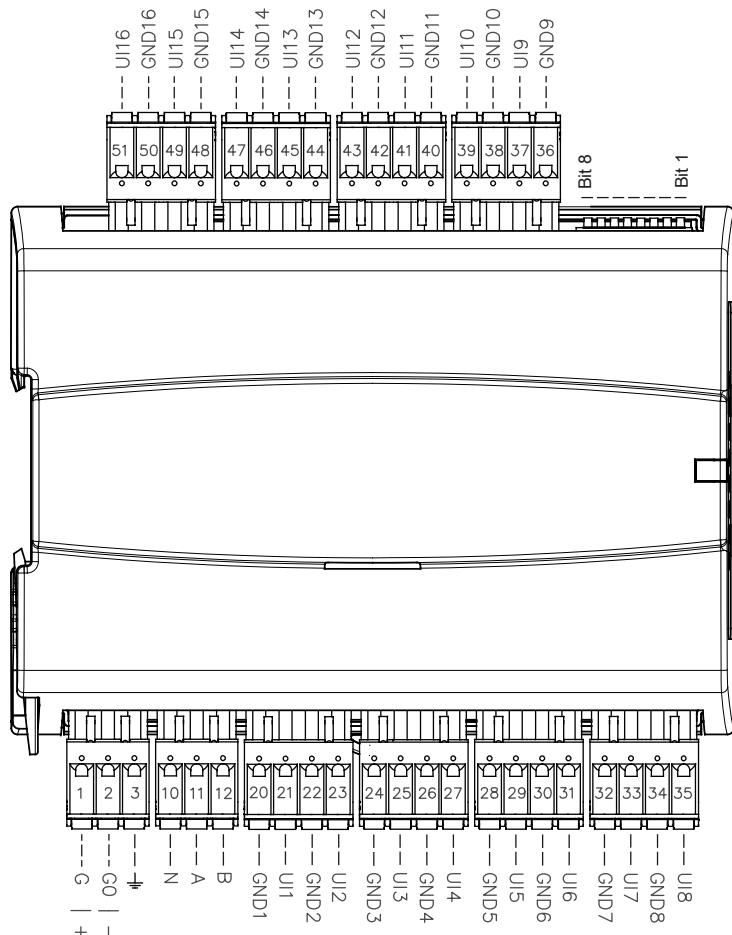

Figure 2-1 DIP-switches for system addressing

### 3 Model IO-EC16UId-X

#### 3.1 Terminals

Terminal	Label	Notes
1	G+	Supply voltage
2	G0-	Supply voltage, system ground (0 V)
3	$\frac{1}{-}$	Technical earth (EMI), connect to earth rail
10	N	Communication port: port earth
11	A	Communication port: inverted (-) data signal line
12	B	Communication port: non-inverted (+) data signal line
20	GND1	Universal ground channel 1
21	UI1	Universal input channel 1
22	GND2	Universal ground channel 2
23	UI2	Universal input channel 2
24	GND3	Universal ground channel 3
25	UI3	Universal input channel 3
26	GND4	Universal ground channel 4
27	UI4	Universal input channel 4
28	GND5	Universal ground channel 5
29	UI5	Universal input channel 5
30	GND6	Universal ground channel 6

Terminal	Label	Notes
31	UI6	Universal input channel 6

50	UO8	Universal output 8
51	GDO	Fused power for digital output

## 7.2 Wiring

For UI connections, see 3.2 *Wiring*.

For UO connections, see 4.2 *Wiring, AC* and 4.3 *Wiring, DC*.

## Appendix A Technical data

### A.1 General data

<b>Supply voltage</b>	24 V AC 50...60 Hz or 24 V DC
<b>Tolerance</b>	18...26 V AC / 22...30 V DC
<b>Power consumption, nominal</b>	IO-EC16UID-X: 4.5 VA / 1.8 W IOEC16UIC-X: 4.5 VA / 1.8 W IO-EC16UOB-X: 7.8 VA / 3.5 W IO-EC16DOE-X: 4.3 VA / 1.5 W IO-EC32DIB-X: 5.2 VA / 2.2 W IO-EC8UID8UOB-X: 5.7 VA / 2.5 W
<b>Protection class</b>	IP20
<b>Ambient humidity</b>	Max. 95 % RH
<b>Ambient temp. (working)</b>	0...55 °C
<b>Storage temperature</b>	-20...+70 °C
<b>Mounting</b>	DIN-rail
<b>Number of modules</b>	8
<b>Inputs/Outputs</b>	See data on the physical product.
<b>Display</b>	No
<b>Status indication type</b>	LED for communication information
<b>I/O indication, front label</b>	LED for indication; status DO/DI
<b>Cable connection</b>	Push-in connectors
<b>Dimensions, external (WxHxD)</b>	140 x 136 x 46 mm
<b>Weight (incl. packaging)</b>	0.30 kg

### A.2 Serial port data

<b>Port type</b>	RS485
<b>Default protocol</b>	EFX
<b>Supported protocols</b>	EFX slave
<b>Port isolation</b>	Yes, 170 V
<b>Communication speed</b>	115200 bps
<b>Cable length</b>	max 300 m

### A.3 Material

<b>Material, housing</b>	Polycarbonate (PC)
--------------------------	--------------------

## A.4 I/O data

<b>Universal input d (UId)</b>	AI: <ul style="list-style-type: none"> <li>✓ 0(2)...10 V DC</li> <li>✓ 0(4)...20 mA (Shunt 150Ω, overcurrent protected)</li> <li>✓ 800...1600 Ω (Pt1000, Ni1000 LG, Ni1000 DIN)</li> <li>✓ 0...4000 Ω (Pt1000 ext, Ni1000 LG ext, Ni1000 DIN ext)</li> <li>✓ Tolerant against misconnection with 24V AC/DC</li> </ul> DI: <ul style="list-style-type: none"> <li>✓ Sourcing input type, GND is ref</li> <li>✓ Pulse counting (pulse width &gt;4ms)</li> <li>✓ Tolerant against misconnection with 24V AC/DC</li> </ul>
<b>Universal input c (Ulc)</b>	AI: <ul style="list-style-type: none"> <li>✓ 0(2)...10 V DC</li> <li>✓ 800...1600 Ω (Pt1000, Ni1000 LG, Ni1000 DIN)</li> <li>✓ 0...4000 Ω (Pt1000 ext, Ni1000 LG ext, Ni1000 DIN ext)</li> <li>✓ Tolerant against mis-connection with 24V AC/DC</li> </ul> DI: <ul style="list-style-type: none"> <li>✓ Sourcing input type, GND is ref</li> <li>✓ Pulse counting (pulse width &gt;4ms)</li> <li>✓ Tolerant against mis-connection with 24V AC/DC</li> </ul>
<b>Universal output b (UOb)</b>	AO: <ul style="list-style-type: none"> <li>✓ 0(2)...10 V DC, (5 mA, short-circuit protected)</li> <li>✓ Tolerant against mis-connection with 24V AC/DC</li> </ul> DO: <ul style="list-style-type: none"> <li>✓ 24 V AC/DC sinking MOSFET, DC (2 A, DC short circuit protected)</li> </ul>
<b>Digital output e (DOe)</b>	DO: <ul style="list-style-type: none"> <li>✓ 24 V AC/DC sinking MOSFET, DC (2 A, DC short circuit protected)</li> </ul>
<b>Digital input b (Dlb)</b>	DI: <ul style="list-style-type: none"> <li>✓ Sourcing input type, GND is ref</li> <li>✓ Pulse counting (pulse width &gt;4 ms)</li> <li>✓ Tolerant against mis-connection with 24V AC/DC</li> </ul>

## A.5 Terminal connectors & wire installation

All terminal ports contains a detachable plug part and must not be connected or disconnected when under voltage or load. Also wire installation or removal to the connector plugs must not be made under voltage or load. Use specified min/max cable areas for the connector type.

### A.5.1 Push-in connectors

To make a secure and correct wire connection to a spring loaded push-in terminal, please follow the below instructions.

#### Solid wire

- ✓ Strip cable insulation to the length as specified for the connector type.
- ✓ Only one wire / terminal is allowed.

#### Stranded wire

- ✓ Strip cable insulation to the length as specified for the connector type.

- ✓ Use a wire ferrule with a length matching the stripped cable and crimp it on the wire end with a suitable crimping tool.
- ✓ Dual wires can be connected to one connector terminal if the wire ferrule is suitable for dual wires, are within max allowed area and if specified in the table for the connector type.

## Installation of wire

- ✓ Push firmly the wire in all the way, no uninsulated wire must be exposed outside of the connector housing. Releasing the spring force by pushing inwards on the orange knob with a small screwdriver at the same time as the wire is pushed in will make the entry easier, especially when using cable with small wire area.
- ✓ End the wire installation by checking so the wire is securely fitted to the connector terminal by trying to pull it out again by using a small but reasonable force.

## A.5.2 Table for connector type vs conductor data

Connector types and conductor data (IEC)	
solid. <b>min</b> , mm <sup>2</sup>	0,2
solid. <b>max</b> , mm <sup>2</sup>	2,5
stranded. <b>min</b> , mm <sup>2</sup>	0,2
stranded. <b>max</b> , mm <sup>2</sup>	2,5
flexible, with <b>min</b> ferrule without plastic sleeve, mm <sup>2</sup>	0,25
flexible, with <b>max</b> ferrule without plastic sleeve, mm <sup>2</sup>	2,5
flexible, with <b>min</b> ferrule with plastic sleeve, mm <sup>2</sup>	0,25
flexible, with <b>max</b> ferrule with plastic sleeve, mm <sup>2</sup>	2,5
2 conductors with same cross section flexible, <b>min</b> twinferrules with plastic sleeve, mm <sup>2</sup>	0,5
2 conductors with same cross section flexible, <b>max</b> twinferrules with plastic sleeve, mm <sup>2</sup>	1,0
Stripping Length (mm)	10-11

## Appendix B Model overview

Article	Universal input c (UIc)	Universal input d (UId)	Universal output b (UOb)	Digital input b (DIB)	Digital output e (DOe)
