

Version history - Application tool 2

In this document, you will find what has changed and what has been updated between the different releases of the Application tool 2.

Version 2.3-1-00

May 5th, 2026

- Added a new Help menu that provides access to manuals and application version history.
 - The application version history is now available from multiple menus in the Application Tool.
 - When connecting to a controller, the system displays a warning for critical application versions, with the option to suppress the warning for one day.
 - At startup, the system checks for newer application versions and lists the available updates. If a critical version is detected, the warning is displayed with increased prominence.
 - In the Trend Tool, the last recorded value and timestamp are displayed to the right of the chart.
 - Added support for loading custom applications via the Application Loader.
 - Optimized cloud-based updates with improved validation of new applications and updates.
 - Application partitions are no longer deleted before loading the operating system.
 - During updates, the operating system (EXOreal) is no longer downgraded if the version specified in the manifest is lower than the version installed in the controller.
 - Updated multiple texts to align with Regin:Go terminology and improve overall usability.
-

Version 2.2-1-06

March 6th, 2026

- Fixed issue with Trend Tool not working correctly with serial communications
-

Version 2.2-1-05

November 10th, 2025

- Exigo 4.3 received a warning that they should be upgraded to 4.4 on all markets, which should only be available for Swedish customers. This is now fixed
-

Version 2.2-1-04

November 10th, 2025

- RCX versions 1.x received a warning that they should be upgraded to 2.x, which isn't possible. This is now fixed
-

Version 2.2-1-03

October 23rd, 2025

- Fix of bug introduced in 2.2-1-1 concerning opening RCX 2.0 template from ExoDesigner
-

Version 2.2-1-02

October 10th, 2025

- Bug introduced in 2.2-1-1 on connection to Regio Midi controllers fixed
 - Fixed translation to Swedish
-

Version 2.2-1-01

October 3rd, 2025

- Serial port communications users can now select bitrate, parity and stop bits
 - Added compare save files feature
 - Improved translations
 - Application Loader improvements
 - Various known bug fixes
-

Version 2.1-1-06

February 19th, 2025

- Problem with slower update speed when updating multiple RCX controllers solved
 - Serial no search improved
 - Solved issue with copy settings when opening a new controller. IO's description in dashboard will now change if changed in settings.
 - Fixed issue, device settings where loaded when only application settings are selected
-

Version 2.1-1-05

December 18th, 2025

- Correction of Swedish translations for **read configuration form controller**
 - Fixed another issue with Exigo 4.4, still some crashes when trying to configure
 - Fixed an issue where configurations were lost when connecting to a Regio midi with the wrong version. (Different version than what the configuration file is prepared for; this was an issue ONLY if you prepared the configuration without saving)
 - Fixed the issue with changes from Microsoft on downloading files. Version 2.1-1-04 will not be able to download files after 24-12-19 when changes from Microsoft are installed on the Cloud server
-

Version 2.1-1-04

November 29th, 2025

- Fixed issue when importing ATF files from Application tool 1. Menu visibility is now calculated correctly.
-

Version 2.1-1-03

November 25th, 2024

- Fixed error with Exigo version 4.4. Since 4.4 is a Swedish-only version, some specific errors needed a solution.
 - Fixed error with crash when choosing help with no internet connection
 - Adjusted mouse scroll speed to be similar to Application tool 1. Was reacting more slowly in Application tool 2.1.
-

Version 2.1-1-02

November 19th, 2024

- Fixed error in cloud connection
-

Version 2.1-1-01

October 18th, 2024

- Support for all controllers in Application tool 1.x
 - Corrigo, Optigo Ardo, Exigo, Regio Ardo/Eedo, Regio Midi are downloaded from the cloud in the same way as Regio RCX
 - Application tool 1.x is now obsolete
 - Notifying the user of the new version
 - Application tool checks in the cloud for a new version of itself and will inform the user when there is a new version available and provide a link to it.
 - Automatic download of new application firmware versions
 - Application tool checks for new versions of applications when starting up
 - Checking the version when contacting a controller
 - Checking the version when contacting a controller is now available, and advise the user to upgrade if a newer version exists. Support for backup/upgrade/restore with one command.
 - Links to online documentation
 - When configuring a controller, the help command will open the online documentation for that controller
-

Version 2.0-1-05

June 19th, 2024

- Fixed issue when opening templates from EXOdesigner
-

Version 2.0-1-04

May 16th, 2024

- Initial Release
-
