

E-CASE-C282DT-S

EXOcompact demo kit

Complete kit for testing the EXO system, with everything you need in a single case. Simply plug the controller to the wall socket and start it up to make simulations, trigger alarms, view indications etc.

- Easy to carry with you
- Excellent aid for applications development in EXO systems

Applications

The demo kit consists of an EXOcompact (C28DT-S) and the suitable equipment for easy testing of programs and individual functions. Since all analogue and digital inputs can be maneuvered and all outputs can be read, it is possible to simulate real situations. The demo kit is therefore highly suitable for use in applications development.

Wiring and dimensions

The demo kit is connected to a 220V wall socket and offers an easily accessible serial terminal for connecting one of Regin's communication cables. The demo kit is also capable of communicating via the TCP/IP protocol.

The demo kit is designed in the shape of a briefcase, making it easy to carry along on various assignments, etc.

Technical data

Supply voltage	220 V AC
Dimensions (HxLxW)	28 x 38 x 9 cm
