

# EXOkey 7

## Hardware lock for EXO4

Hardware locks in five sizes, XS, S, M, L and XL. EXOkey is delivered with the software EXO4.

- Hardware lock that protects the EXO software licence
- Available for USB-connection or as PC Card
- A type of protection against software copying
- Base the choice of hardware lock on the size of your installation

EXOkey is a hardware lock used to protect the EXO software. EXO4 is included on delivery of all the keys. The size of EXOkey is not, like before, determined by the number of installed controllers, but by the number of installed physical I/O-points. This gives you a fair price whether you install small or large controllers.

### Models

EXOkey is available in five sizes: XS7, S7, M7, L7 and XL7. They replace the earlier XS6, S6, M6, L6, XL6 and XXL6.

All EXOkey models provide server functionality. For price reasons, EXOkey XS is suitable as a client key.

### Installation

Drivers for EXOkey are automatically installed when EXOsys is installed. EXOsys is a software that is common for many Regin products, for instance EXOdesigner and EXO4.

If EXOsys has been installed and Windows cannot find a suitable driver the first time EXOkey USB or EXOkey PC Card are connected, contact Regin Support.

### Port standards

The keys are available for USB-connection or as PC Card.

### USB-connection

### PC Card

## Models

All models are available for USB-connection or as PC Card and are delivered with EXO4.

Hardware lock	Max number of I/O-points	Network	Main computer (collection of alarms, events, logs, etc)
