

E-CASE- VCA283DW-4-24

Corrigo demo case

Complete case with everything you need to test a Corrigo controller. Simply plug the controller into the wall socket and start it up in order to make simulations, trigger alarms, view indications, etc.

- ✓ Easy to use and carry
- ✓ Used for easy testing before commissioning

Application

The demo case consists of a Corrigo VCA283DW-4 and equipment suitable for easy testing of configurations and individual functions before commissioning. The demo case controller also contains a built-in web server, which can be configured and tested from the comfort of your office. Real-life situations can be simulated by manoeuvring all analogue and digital inputs and monitoring all outputs. The demo case is very easy to bring along on various assignments.

Installation

Using the included transformer, the demo kit is connected to a 230 V wall socket and offers two easily accessible serial terminals for connection of Regin's communication cables. The case is also equipped with a TCP/IP connection, which can be used to verify the web server's configuration using both internal intranet solutions as well as externally, via the Internet.
