REACH – Declaration of Conformity to EC 1907/2006.

REACH is an EU directive with conformed legislation in each member country of the European Union. The objective is to control and reduce the use of chemicals within the European Union.

There are two main parts of the REACH legislation:

1. Companies in the European Union that produce products from imported chemicals into the European Union, in larger quantities than 1 ton per year and chemical type, must register these in a national register. A registration is also necessary when products produced or imported by the company contain or emit chemicals, with a total amount of each chemical of more than 1 ton per year.
2. All companies must verify that dangerous substances listed in the specific SVHC candidate list are not included in products delivered by the company. There is a specified maximum acceptable limit for the content, max 0.1% is allowed of the substances published by the ECHA (The European Chemical Agency), with the number of substances expected to increase in the future.

The EC Regulations 1907/2006 for REACH compliance applies to all products offered by AB Regin, and the statements are based on our current knowledge and experience. None of our products include substances in the list stated in the REACH directive (236 substances). Our products are regularly checked in accordance with the REACH directive and, if necessary, adapted to changing requirements.
